Solving Equations - Clearing the Fraction(s)

$$1) \frac{2x}{3} - \frac{1}{6} = \frac{3}{2}x + 1$$

$$2) \frac{3t}{5} - \frac{1t}{10} = t - \frac{5}{2}$$

$$3) \frac{1}{5}x - \frac{2}{3}x - 2 = -\frac{2}{5}x$$

$$*4) \frac{1}{4}(3x-1) + \frac{1}{6}(x+3) = 3$$
